## EXPERIENCE

### Infolabz, Gujarat - Internship

July 23 – August 23

- Infolabz is an IT Service based company
- It was of dynamic web pages by using React and here we got the online real time data fetch and In order to fetch some live data we used some concepts of http (request - response mechanism ) and ES6.

## PROJECTs

### Codeblogging:

- Wordpress**
- It is a simple blogging website built using WordPress itself.
- It's a simple elegant website display blogs about different coding languages.
- This is my own project, building this I learnt the most important tool WordPress, how to develop a website, how to deploy website using WordPress from Scratch.

### Career Zone:

- HTML5, CSS3, JS, JQuery with backend PHP and database using Mysql**
- Website through which college students to achieve their on campus Placement directly.
- My job is to done HTML and CSS, I also contributed with backend.
- My team is working this ongoing project and there are many updates like face-recognition, higher resolution. posting a blog on a portal.
- I learnt: to do work with team (4), coordinating throughout the project, deal with people having different mindset.
